AMAZON

The Everything Store

15+ Minute Shark Tank Pitch
Complete Team Allocation, Slide Content, Scripts, Transitions and Q&A;

7-Person Presentation Team

How to Use This Document

This document combines the complete 12-slide Amazon investor pitch with speaker allocation for seven team members. The presentation is designed to run for approximately 16 minutes, leaving a small safety margin above the required 15 minutes.

- Replace “Member 1” through “Member 7” with the presenters’ names.
- Rehearse transitions so the pitch sounds like one leadership team, not seven separate speeches.
- The market figures, financial targets, valuation and investment ask are illustrative classroom assumptions, not historical Amazon data.
- Slides should remain visual and concise. The full wording belongs in the presenters’ preparation notes.

Recommended visual identity

Element	Recommendation
Format	16:9 widescreen
Primary color	Deep navy #131A22
Accent	Amazon orange #FF9900
Supporting color	Blue #146EB4
Fonts	Aptos, Arial or Calibri
Style	Minimal, premium, customer-focused and data-driven

Team Allocation and Timing

Member	Role	Slides	Target time
1	Founder: Vision and Problem	1-2	2:15
2	Product Lead: Solution and Journey	3	2:00
3	Strategy Lead: Market Opportunity	4	2:00
4	Business Lead: Revenue and Flywheel	5-6	2:30
5	Experience Lead: UI/UX and Moat	7-8	2:30
6	Technology Lead: Architecture and Operations	9-10	2:30
7	Growth/Finance Lead: Roadmap and Ask	11-12	2:30
	TOTAL	12 slides	Approx. 16:15

Role-selection guidance

- Member 1 should be the strongest storyteller and establish confidence immediately.
- Member 4 should be comfortable explaining revenue, unit economics and marketplace logic.
- Member 5 should be expressive and confident with product design terminology.
- Member 6 should be the strongest technical speaker.
- Member 7 should be a confident closer who can defend the investment ask.

Member 1: Founder Vision and Customer Problem

Slide ownership: Slides 1-2 Target speaking time: 2 minutes 15 seconds

Slide 1 - Amazon: The Everything Store

- Dark navy hero slide
- Amazon title and smile-arrow motif
- Tagline: One platform. Every need. Delivered.
- Laptop/mobile commerce mockup on the right

Slide 2 - Shopping Is Fragmented

- Limited choice
- Price uncertainty
- Time and travel
- Limited product information and trust

Full speaking script

Presentation script
Good morning Sharks.

Before we begin, let me ask you one question. What if every product you ever wanted was available in one place, at a competitive price, accessible 24 hours a day, and delivered directly to your doorstep?

Today, we are not asking you to invest in another online shopping website. We are asking you to invest in the future of commerce.

Our company is Amazon, and our ambition is simple but enormous: to become the most customer-centric company in the world and create one destination where people can discover and purchase virtually anything.

Today, traditional shopping has significant limitations. A physical store can only stock what fits on its shelves. Customers travel between multiple stores, compare prices manually, wait in queues and still may not find what they need. Even when a product is available, customers may lack reliable reviews, comparisons and detailed information.

We see these limitations not simply as inconvenience, but as a massive business opportunity. Customers do not need another store. They need one trusted destination. And that brings us to our solution.

Transition: So what happens when we put the entire shopping journey into the customer’s hands?

Member 2: Amazon Solution and Customer Journey

Slide ownership: Slide 3 Target speaking time: 2 minutes

Slide 3 - One Platform, Millions of Possibilities

- Central mobile mockup
- Journey: Search - Compare - Buy - Pay - Track - Receive - Review
- Four UI states: Home, Product, Checkout and Tracking

Full speaking script

Presentation script
That is exactly what Amazon solves. Amazon brings the entire shopping journey into a single digital platform.

Imagine that I want to buy headphones. Instead of visiting multiple electronics stores, I open Amazon. I search for headphones and immediately see multiple products. I can compare prices, specifications, delivery dates, ratings and customer reviews.

After making my decision, I add the product to my cart, enter my delivery address, complete a secure payment and place the order. But our relationship with the customer does not end at checkout. The customer can track the order as it is confirmed, packed, shipped and delivered. After receiving it, the customer can leave a review that helps the next buyer.

Amazon is not simply digitizing the store. We are redesigning the entire shopping journey around the customer. Every part of our experience reduces friction: fewer steps to purchase, better information before purchase, greater confidence during payment and transparency after purchase.

Transition: A great solution becomes a great investment only when the market is large enough. Our market is not one category or one city. It is commerce itself.

Member 3: Market Opportunity

Slide ownership: Slide 4 Target speaking time: 2 minutes

Slide 4 - We Are Digitizing Commerce

- TAM-SAM-SOM concentric-circle visual
- Illustrative figures clearly labelled as assumptions
- Category expansion: Books, Electronics, Fashion, Home, Beauty and Essentials
- World map or geographic expansion backdrop

Full speaking script

Presentation script
Now let us discuss what makes Amazon particularly interesting as an investment: the size of the opportunity.

We are not targeting one product category. We are targeting consumer commerce. Our strategy is to start with products that are easy to catalogue, compare and deliver, such as books and electronics. Once the customer relationship and logistics infrastructure are established, the same platform can expand into fashion, home products, personal care, groceries and thousands of additional categories.

From an investor's perspective, we view the market in three levels. TAM represents the enormous amount consumers spend across retail. SAM represents the portion we can reasonably address through digital commerce and our operating markets. SOM represents the portion Amazon can realistically capture during its initial expansion.

The most important strategic advantage is that every new category gives an existing customer another reason to return without requiring us to acquire that customer again. This increases customer lifetime value and makes the platform more efficient as it expands.

Transition: A huge market means little unless the activity can be converted into revenue. Member 4 will explain how Amazon makes money.

Member 4: Business Model and Revenue Flywheel

Slide ownership: Slides 5-6 Target speaking time: 2 minutes 30 seconds

Slide 5 - Multiple Revenue Streams

- Direct retail margin
- Marketplace commission
- Fulfilment and logistics fees
- Membership subscriptions
- Seller advertising

Slide 6 - Amazon Flywheel

- More sellers
- More selection
- Better prices
- Better customer experience
- More customers
- Cycle returns to more sellers

Full speaking script

Presentation script
This is where Amazon becomes much more than a retailer.

Our first revenue source is traditional retail. We purchase selected products, sell them to customers and earn a margin. But Amazon does not have to own everything it sells. Third-party businesses can sell through our marketplace, and Amazon earns a commission on each successful transaction.

Sellers can also pay Amazon to store, pack and deliver their products. As customer loyalty increases, we can introduce membership programs that create recurring subscription revenue. Sellers competing for customer attention create another opportunity through sponsored product advertising. One customer transaction can therefore create value for Amazon in several ways.

Our real advantage, however, is not a single revenue stream. It is the Amazon flywheel. More sellers create more selection. Greater selection and competition improve customer value. Better customer experiences attract more customers. More customers make Amazon more valuable to sellers, bringing still more products to the platform.

This cycle can continuously reinforce itself. Investors should therefore view Amazon not simply as a store, but as a marketplace whose value increases as participation grows.

Transition: Customers do not care about our flywheel. They care whether Amazon is easier and better to use. That is where our product experience becomes critical.

Member 5: UI/UX and Competitive Advantage

Slide ownership: Slides 7-8 Target speaking time: 2 minutes 30 seconds

Slide 7 - Designed Around the Customer

- Three mobile screens: Discover, Decide and Buy
- Persistent search, categories and recommendations
- Product photos, ratings, reviews, price and delivery date
- Three-step checkout: Address, Payment and Confirmation

Slide 8 - Why Amazon Wins

- Five-moat diagram: Trust, Selection, Data, Seller Network and Logistics
- Comparison with physical retailers and small online stores

Full speaking script

Presentation script
For an e-commerce company, technology alone does not create loyalty. Experience does.

Amazon’s interface is designed around one principle: reduce the friction between what a customer wants and the moment the customer receives it. Search is central so customers can immediately find what they need. On the product page, images, pricing, ratings, reviews, specifications, seller details and delivery estimates support a confident decision. Checkout is simple, transparent and focused on completing the task.

The customer should always understand five things: Where am I? What am I buying? What will it cost? When will I receive it? What should I do next?

This experience creates defensibility. A competitor can copy the colour of our website, our buttons and even individual features. What it cannot easily copy is the ecosystem. Over time, Amazon develops customer relationships, seller partnerships, product reviews, behavioural data and operating experience.

That creates a competitive moat around the platform. The website can be copied. The ecosystem cannot be copied overnight.

Transition: Building that ecosystem at scale requires serious technology and operations. Let us look at what happens behind the Buy Now button.

Member 6: Technology Architecture and Operations

Slide ownership: Slides 9-10 Target speaking time: 2 minutes 30 seconds

Slide 9 - Behind Buy Now

- Experience layer: App, Website and Seller Portal
- Services: Search, Catalogue, Cart, Payment, Orders and Reviews
- Intelligence: Recommendations, Fraud Detection and Forecasting
- Data: Transaction database, Search index, Cache and Analytics

Slide 10 - From Click to Doorstep

- Order - Inventory Reserved - Pick and Pack - Shipping - Last Mile - Customer
- Security strip: Encryption, Tokenized payment, Access control, Monitoring and Backup

Full speaking script

Presentation script
Let us look behind the interface. Every time a customer selects Buy Now, multiple systems work together.

The platform verifies the customer and product. The catalogue service supplies product information. Inventory confirms availability. The payment service handles the transaction. The order service creates the order, and fulfilment determines how the product will reach the customer.

We do not want one giant application where one failure affects the entire platform. Search, payments, orders and shipping should be independently scalable services. Event-driven communication can connect actions such as payment completion, inventory reservation, shipment and refund without tightly coupling every process.

Amazon’s real challenge is turning a digital transaction into a physical delivery. Once an order is confirmed, inventory is reserved, the product is picked and packed, transferred into the logistics network and delivered to the customer.

Security operates throughout the platform through encrypted communication, controlled access, protected payment data, fraud detection, monitoring, backups and recovery procedures. Technology gives us scale. Logistics turns that scale into customer trust.

Transition: We have the product, market, business model and infrastructure. The final investor question is: where do we go from here, and what are we asking from you?

Member 7: Growth Strategy, Investment Ask and Close

Slide ownership: Slides 11-12 Target speaking time: 2 minutes 30 seconds

Slide 11 - Three-Phase Roadmap

- Phase 1: Prove, 0-12 months
- Phase 2: Scale, 12-24 months
- Phase 3: Ecosystem, 24-36 months

Slide 12 - Investment Ask

- Illustrative ask: INR 10 crore for 10% equity
- 30% Technology, 30% Logistics, 20% Acquisition, 10% Seller Growth, 10% Service and Compliance
- Minimal navy background with one strong closing statement

Full speaking script

Presentation script
We are not proposing reckless expansion. Our strategy is to build Amazon in stages.

Phase one is about proving the experience. We focus on selected markets, dependable sellers, strong product categories and, most importantly, customer trust. Phase two focuses on scale. More customers attract more sellers, while increasing order volume supports stronger fulfilment capabilities. Phase three turns Amazon from an online retailer into a commerce ecosystem through membership, seller services, advertising and new technology-powered businesses.

Sharks, you have seen the problem, our solution, the size of the opportunity, how we generate revenue, why our marketplace strengthens as it grows, and how technology and logistics allow us to scale.

Today, in this illustrative pitch scenario, we are seeking INR 10 crore in exchange for 10% equity. The funds will be allocated across technology, logistics, customer acquisition, seller growth, customer service and compliance.

But let me leave you with one final thought. You are not investing in a website that sells products. You are investing in infrastructure for commerce. Every new seller increases selection. Every new product gives customers another reason to visit. Every additional customer makes Amazon more valuable to sellers, and every transaction strengthens the ecosystem.

Traditional businesses build more stores. Amazon brings every store to the customer. Sharks, the future of shopping is not another physical location. The future of shopping is Amazon. So, who wants to build that future with us?

Transition: All seven members step slightly forward. After a short pause, the team says: “Thank you, Sharks.”

Team Stage Direction

- Members 2-6 stand slightly behind the active speaker.
- Member 1 steps forward for the opening and sets the pace.
- At each transition, the current speaker turns slightly toward the next presenter and steps back.
- Do not crowd the screen or walk across the projection path.
- For Slide 12, all seven members move slightly forward to signal a united leadership team.
- Member 7 delivers the last question, pauses, and the full team says: “Thank you, Sharks.”

Delivery rules

- Do not read the slide. Use the slide as visual evidence while speaking to the Sharks.
- Keep eye contact during the opening, investment ask and closing line.
- Pause after major investor statements instead of filling silence.
- Use a consistent pronunciation for Amazon, TAM, SAM, SOM, UI/UX and API.
- If one person forgets a line, the next person should continue from the transition rather than correcting them publicly.

Q&A; Ownership

Investor question	Primary owner
What problem are you solving?	Member 1
Why would customers use Amazon?	Member 2
How large is the market?	Member 3
How do you make money?	Member 4
How does the flywheel work?	Member 4
Why can competitors not copy you?	Member 5
How will the UI increase conversion?	Member 5
How can the platform scale?	Member 6
How will you manage payment failure or fraud?	Member 6
How will you manage delivery operations?	Member 6
How will you acquire customers?	Member 7
Why do you need INR 10 crore?	Member 7
How was the valuation determined?	Member 7 with Member 4
Why should we invest?	Member 1 or Member 7

Best answer to “Why should I invest in Amazon?”

“Because Amazon does not need to win by selling one product. We win by becoming the place where customers begin their purchasing journey. Once customers, sellers, data and fulfilment come together, every part of the ecosystem strengthens the others. You are not investing in today’s online store. You are investing in tomorrow’s commerce platform.”

Final Rehearsal Checklist

- Target total time: 16 minutes. Do not exceed 17 minutes during rehearsal.
- Run at least three full-team rehearsals and one timed Q&A; rehearsal.
- Confirm that every speaker can deliver their section without reading full paragraphs.
- Test slide clicker, projector, fonts, videos and mockups before the pitch.
- Keep a PDF backup of the slides and a copy on two devices.
- Use the same illustrative labels on market figures, investment assumptions and financial targets.
- Prepare one shorter 12-minute version in case the Sharks reduce presentation time.
- End immediately after the final question. Do not weaken the close by adding extra explanation.

The deck’s investor logic is: Problem - Solution - Market - Revenue - Defensibility - Experience - Technology - Growth - Investment Ask. Maintaining this sequence will make the seven-person presentation feel unified and persuasive.
